SUMMARY

Full-stack engineer, nine years shipping web and SaaS products on .NET and TypeScript, usually as the only developer or the senior one on a small team. Currently lead engineer on a HIPAA-compliant care platform on AWS. Also does applied ML and computer vision work, with published research in medical imaging and representation learning.

TECHNICAL SKILLS

Languages: C#, TypeScript, Python, C++, Kotlin, JavaScript

Backend: ASP.NET Core, EF Core, SignalR, MediatR, Node.js, NestJS, ElysiaJS, Bun, FastAPI

Frontend & Mobile: React, Next.js, Angular, Blazor, Tailwind CSS, Kotlin Multiplatform, .NET MAUI, React Native

Data: PostgreSQL, SQL Server, MongoDB, Redis, DynamoDB, Firebase, Prisma

AI/ML: PyTorch, TensorFlow, OpenCV, YOLO, Claude/GPT/DeepSeek APIs, MCP, tool-use agents

Game Dev: Unity, Godot, PhaserJS, Colyseus, Metamod:Source 2

Cloud & DevOps: AWS (Amplify, S3, Lambda, Cognito), Azure, Cloudflare, Docker, Kubernetes, GitHub Actions

PROFESSIONAL EXPERIENCE

Senior Software Engineer | [EmTech Care Labs](#) | Portland, ME

Jan 2025 – Present

- Lead engineer on a HIPAA-compliant Alzheimer's care platform on AWS: real-time messaging, push notifications, and shared care plans for 200+ caregivers and patients.
- Consolidated three web and mobile codebases into one TypeScript monorepo with a shared component library.
- Encrypted PHI, audit logging, and role-based access; passed an outside HIPAA readiness review with no critical findings.
- Scoped features with clinicians, delivered the six-month roadmap solo, mentored two junior engineers.

Senior Software Engineer | [AllFactors](#) | Santa Clara, CA

Oct 2021 – Dec 2024

- Rebuilt a legacy ASP.NET Web Forms real-estate analytics app on Blazor WebAssembly; page loads about twice as fast.
- Built a real-time market-data pipeline on SignalR and SQL Server change tracking; sub-second updates to hundreds of concurrent users.
- Wrote the shared Blazor component library (data grids, charts, filters) every dashboard is built on, with automated regression tests.

Software Engineer | [Smart Meal Service](#) | Russia

Sep 2020 – Jul 2021

- C#/.NET control software for a self-service food kiosk and a robotic cashier, down to the payment-terminal and hardware protocols.
- Customer ordering app in Xamarin; admin dashboard in ASP.NET Core and Angular.
- Hardware abstraction layer so one codebase runs on all three machine models; automated order routing to kitchen stations.

Game Developer | [Pentalight Technology](#) | Malaysia

Mar 2020 – Feb 2021

- Multiplayer networking, spatial audio, and hand tracking for a VR smart-city simulation in Unity, plus a desktop spectator client.
- Automated the art pipeline (model import, LOD generation, lighting bakes); multi-hour scene builds became unattended jobs.

Earlier: Game Developer at EC Dev Team, Uzbekistan (2016 – 2019), led an RTS mod for Paradox's Clausewitz Engine. Freelance Developer (2019 – 2020), .NET and Python NLP applications.

EDUCATION

Northeastern University, M.S. in Computer Science, GPA 4.0, Boston, MA

Jan 2024 – May 2026

Suffolk University, B.S. in Computer Science, Cum Laude, Boston, MA

Sep 2021 – May 2023

FEATURED PROJECTS

LogisticsX

<https://logisticsx.app> | [GitHub](#)

.NET 10, EF Core, MediatR, SignalR, Angular 21, Kotlin Multiplatform, PostgreSQL, Claude API, Stripe, Docker

- AI dispatcher on the Claude API with custom tool use: matches loads to trucks, checks federal hours-of-service, plans multi-stop routes.
- Four web portals (admin, dispatcher, customer, broker), an Android/iOS driver app, and a multi-tenant .NET backend.
- Integrations with DAT, Truckstop, Samsara, and Motive; Stripe payouts.

Meat.gg

<https://meat.gg>

ElysiaJS, Next.js, PostgreSQL, Prisma, Bun, C++23, Metamod:Source 2, Docker, Stripe

- Community platform for Counter-Strike 2 servers, 50K+ registered users: profiles, messaging, friends, and a Stripe cosmetics shop.
- Native C++ Metamod:Source 2 plugin linking live game servers to the web backend for in-game bans, reports, and moderation.

OGStack

<https://ogstack.dev> | [GitHub](#)

Next.js 16, ElysiaJS, Bun, PostgreSQL, Prisma, Satori, Cloudflare R2, Stripe, Docker

- SaaS that renders the social-share image for any web page from one line of markup; 10K+ images during beta, served from Cloudflare R2.
- Multi-model pipeline (Claude, GPT, DeepSeek) extracts page branding, generates a background, and renders the image with Satori.

DepVault

<https://depvault.com> | [GitHub](#)

Next.js, ElysiaJS, PostgreSQL, Prisma, Bun, .NET AOT CLI, Docker

- Dependency vulnerability scanner across eight ecosystems (npm, PyPI, NuGet, Cargo, Maven, and more); 1,000+ dependencies in seconds.
- Encrypted secrets vault with a .NET AOT CLI that injects tokens into CI/CD pipelines.

MelanomaNet

[GitHub](#) | [Paper](#)

PyTorch, EfficientNet V2, GradCAM++, OpenCV, ISIC 2019

- EfficientNet V2 classifier over nine skin-lesion categories, 0.86 weighted F1; GradCAM++ heatmaps mapped to the ABCDE criteria dermatologists use. On arXiv.
